

FACILITIES NEWS

A quarterly update on Facilities Projects

January, 2017

The Pines Apartments

Engineering is complete & Building Permits have been secured for The Pines. We have been busy completing demolition & clean-up. Plumbing & electrical work is now being done, see photo below of future Women's Shower Room.

New Water Tank

The replacement Water Tank has been completed and set up. Geo-loops were successfully installed in the tank, and it is now online working to heat and cool the LRC.

New Maintenance Building

Work has begun on the inside of the new Maintenance Building. The areas that will become the Woodworking Shop (see photo left) and bathroom and offices (see photo below) have been built out and are being finished.

Electrical and Water lines for the building have been installed underground. Maintenance will continue to work on this space throughout the Spring Semester. Once the building is finished the current Maintenance Building will be vacated and remodeled into an Athletics Field House.

Tree Trimming

Groundskeepers have been busy trimming hazardous limbs from campus trees, from upper campus down to the athletic fields. The new Boom Lift allowed us to safely remove even the highest limbs without putting anyone in danger of falling.
